Housing 2.0

Looking for houses and apartments is not as much fun as it could be. Websites like Homegate and ImmoScout present some filtering options, but we find that they do not give us a lot of information about the objects themselves. Also, the user interface is somewhat boring, since it is just a list of the results and does not show any relations between the different objects.

The goal of this thesis is to come up with a new way of searching, filtering and displaying housing data. We already have a sizeable dataset and it will be straightforward to get more data. We have some ideas on how to approach this task, but we would love to hear your take on this as well! If this sounds interesting to you, do not hesitate to contact us so we can have a chat.

Requirements: Creativity and programming skills are an advantage. There will be weekly meetings with your supervisors to discuss progress and open questions.
