

Android FPS Measurement

Finding good metrics to measure the performance of Android phones is surprisingly difficult. Intuitively, the number of frames per second (FPS) should give a good indication about whether the phone is running smoothly.

In this thesis we want to investigate the FPS (and related) metrics and determine their viability as performance metrics. If this sounds interesting to you, please do not hesitate to contact so that we can have a chat!

Requirements: Creativity and programming skills are an advantage. The student(s) should be able to work independently!
