

## The Future of Jobs

We are experiencing another industrial revolution. The first one brought us steam machines and made our muscles obsolete. Henry Ford and his moving assembly line brought us the second and introduced mass production. Now the digitization of jobs is about to be the third one. We no longer need to walk into a bank just to wire money or withdraw funds. We have all heard of self driving cars that are about to make taxi and truck drivers obsolete. And we all know this will not be the end of it. But it is called revolution for a reason. It will not stop there.

We want to understand what exactly is happening and what will happen. Which jobs will be affected? By how much? Should we all start looking for new and safer jobs? We have started analyzing various data sets and have made first steps. But we want your help and your ideas.

**Requirements:** Interest in analyzing or visualizing large and complex data sets.

**Interested? Please contact us for more details!**
