

Prof. L. Thiele

Semester or Bachelor Thesis

## Remote Listening

In sales promotion you can read statements like:

”... interested in groundbreaking spy phone software ...?  
These programs allow you to quite simply alter popular  
cell phones into a remote listening device ...”

Interested to investigate?

The aim of this project is to get information about programming possibilities and tools for popular smart phones. Based on this information a suitable product will be selected and an application has to be realized.

This project is suited as semester or master thesis for one or two students of the departments D-ITET or D-INFK.
